

In [1]: `import datetime as dt`

In [2]: `birthdate_input = input("Enter your birth date in YYYY-MM-DD format: ")`

Enter your birth date in YYYY-MM-DD format: 1999-07-15

In [6]: `birthdate = dt.datetime.strptime(birthdate_input, "%Y-%m-%d")`
strptime function is used to convert string to datetime object

In [7]: `age = dt.datetime.today().year - birthdate.year`

datetime.to.day = 16/11/2023
birthdate.year = 15/07/1999

In [8]: `print(f"Your age is: {age} years old.")`

Your age is: 24 years old.
